

M. Lokesh

Roll no: 19B21A0432

Branch : KIET ECEA

1) . In the below elements which of them are values or an expression? eg:- values can be integer or string and expressions will be mathematical operators.

---expression

'hello' -----value

-87.8 -----value

- -----expression

/ -----expression

+ -----expression

6 -----value

Q2) What is the difference between string and variable?

String: String can be written in quotes such: "apple", 'apple'

Variable: It is the thing in which we can store data just like a container.

Q3) Describe three different data types.

List: the list is used for storing multiple data items in a single variable.

Integer: integer can store only numerical values.

Float: float can store only floating values such as 233.33, 22.2, etc.

Q4) What is an expression made up of? What do all expressions do?

Expression is made up of values, containers, and mathematical operators (operands) e.g

$a = 2 + 3$ and expressions are used to evaluate the values or represent the result on the screen.

Q5) This assignment statements, like `spam = 10`. What is the difference between an expression and a statement?

Expression is made up of values, containers, and mathematical operators (operands) and the statement is just like a command that a python interpreter executes like `print`.

Q6) After running the following code, what does the variable `bacon` contain?

```
bacon = 22
```

```
bacon + 1
```

Sol: it gives 23 as

execution code: `bacon=221`) . In the below elements which of them are values or an expression? eg:- values can be

integer or string and expressions will be mathematical operators.

——expression

'hello' -----value

-87.8 -----value

- -----expression

/ -----expression

+ -----expression

6 -----value

Q2) What is the difference between string and variable?

String: String can be written in quotes such: "apple", 'apple'

Variable: It is the thing in which we can store data just like a container.

Q3) Describe three different data types.

List: the list is used for storing multiple data items in a single variable.

Integer: integer can store only numerical values.

Float: float can store only floating values such as 233.33, 22.2, etc.

Q4) What is an expression made up of? What do all expressions do?

Expression is made up of values, containers, and mathematical operators (operands) e.g

`a = 2 + 3` and expressions are used to evaluate the values or represent the result on the screen.

Q5) This assignment statements, like `spam = 10`. What is the difference between an expression and a statement?

Expression is made up of values, containers, and mathematical operators (operands) and the statement is just like a command that a python interpreter executes like `print`.

Q6) After running the following code, what does the variable `bacon` contain?

```
bacon = 22
```

```
bacon + 1
```

Sol: it gives 23 as execution code

Q7) What should the values of the following two terms be?

```
'spam' + 'spamspace'
```

```
'spam' * 3
```

sol: it will be the same

Q8) Why is `eggs` a valid variable name while `100` is invalid?

Ans: because we can't start giving variable an integer name. if we, we should begin with, a string. What three functions can be used to get the integer, floating-point number, or string version of a value?

Q9) ans: `str()`, `int()`, `float()`

Q10) Why does this expression cause an error? How can you fix it?

```
'I have eaten' + 99 + 'burritos'
```

sol: because 99 is an integer it cannot be concatenated with strings, if we have to concatenate it we need to do typecasting.

Q7) What should the values of the following two terms be?

'spam' + 'spamspam'

'spam' * 3

sol: it will be the same

Q8) Why is eggs a valid variable name while 100 is invalid?

Ans: because we can't start giving variable an integer name. if we, we should begin with, a str
What three functions can be used to get the integer, floating-point number, or string version of a value?

Q9) ans: str(), int(), float()

Q10) Why does this expression cause an error? How can you fix it?

'I have eaten' + 99 + 'burritos'

sol: because 99 is an integer it cannot be concatenated with strings, if we have to concatenate it we need to do typecasting.
